AI FAQ Assistant API

PROJECT OVERVIEW

Project Title

AI FAQ Assistant API

Introduction

The AI FAQ Assistant API is a software project designed to answer frequently asked questions through an application programming interface. It accepts a user's question, processes the request, and returns a relevant answer in a structured response.

Objectives

1. Provide quick responses to frequently asked questions.
2. Create a backend API for submitting questions and receiving answers.
3. Integrate an AI model to generate helpful responses.
4. Validate requests and handle errors safely.

Main Modules

User request handling; FAQ and AI response processing; API routing; error handling; testing and documentation.

Expected Outcome

A working API that accepts questions and returns responses in a consistent format. Actual performance depends on implementation, configuration, and the AI service used.
