AI FAQ Assistant API

PHASE 2: BACKEND DEVELOPMENT

Objective

Build the server and API routes for receiving and processing FAQ questions.

Implementation Steps

1. Initialize a Node.js project.
2. Install Express and required dependencies.
3. Configure environment variables.
4. Create the server and application files.
5. Add request validation and API routes.

Example Endpoint

POST /api/faq/ask

Example Request

{ "question": "What is artificial intelligence?" }

Example Response

{ "success": true, "answer": "Artificial intelligence is a field of computing that develops systems able to perform tasks commonly associated with human intelligence." }

Note

This is an illustrative API format. Match endpoint names and response fields to the actual source code.
